

## CUSTOM GALLERY - CEILING/PENDANT

**PROJECT:** National Audio-Visual Conservation Center - Culpeper, VA  
**ARCH:** BAR Architects  
**LT DES:** HLB Lighting Design (2007)

These sophisticated drum fixtures provide wide spacing through the use of metal halide uplight with a separate incandescent lamp providing a glow to the special Starfire glass lens. At 42" in diameter, they were designed as part of the architectural scheme from the beginning.

The NAVCC is a separate facility dedicated to the audio and visual arts that is part of the Library of Congress. Located outside of Washington DC, it was funded by the Packard Humanities Institute.
