

WORK IN PROGRESS Shop Photos

As a manufacturer of decorative architectural lighting we, unfortunately, do not get to see all the fixtures we produce in the setting of intended application. We photograph fixtures that are unusual, significant in their use of materials or employ exquisite design. Many of the fixtures constructed are a result of collaboration with a designer or architect. Our collective experience of handcrafting fixtures for decades, ensures Borden Lighting is a resource for the design community. This foundation allows us to offer modified standard fixtures, tailor-made to the specific requirements of a project. The pictures here showcase fixtures as they are assembled, tested and packed for shipping. For more information ask your local rep or contact the factory directly by clicking on the link below.
