Many manufacturers are not open to modifying standard products, particularly for smaller quantities. Borden Lighting's custom heritage gives us the ability to modify standard products to meet the design requirements of a wide variety of projects, what we call "MODS". Sometimes it might be a change in scale, the addition of decorative detail or special finishes, all of which we can accommodate. Often, design objectives can be met by modifying a standard fixture, rather than creating a custom one, faster and at less cost.

Shown here are some examples, but call us or your rep to explore this way to enhance your designs.
