MODS: Many lighting manufacturers are resistant to making modifications to standard products, particularly for small quantities. Borden Lighting's long heritage of craftsmanship gives us the ability to modify standard products to meet the design requirements of a wide variety of projects; what we call "MODS". Sometimes it might be a change of scale, the addition of decorative detail, a logo or special finishes, all of which we can accommodate. Often, design objectives can be met by modifying a standard fixture, rather than creating a custom one, faster and at less cost. Shown here are some examples, but call us or your rep to explore how this service can enhance your project.
