

LIGHTING FOR TRANSIT

3D-2881

**PROJECT: BART Warm Springs Station
Fremont, CA**
**ARCH: HNTB Architects and FMG Architects
San Francisco, CA**
EE: Parsons-Brinckerhoff Engineers

August
2017

For the newest BART station, the decision was made that the light fixture was to function as more than just a light fixture. The linear fixture that Borden manufactured combines rigorous functional requirements for structural, lighting, signage and audio, all in one design. Careful consideration was given to install-ability, circuiting, controls and clean visual appeal. Totalling a quarter mile in length—both platforms—the streamlined form suggests its transportation context.
