LUMINOUS CYLINDERS

Light fixture designs come and go. The luminous cylinder is not a new idea, but with incandescent sources, it had to have a large diameter...think church lighting. Later linear fluorescent sources made smaller diameters possible. With the advent of LEDs, the luminous cylinder has many more design possibilities.

Borden Lighting now offers luminous cylinders in diameters of 2" to 10" and in a variety of heights, all designed around LEDs, giving the designer many choices of scale for a variety of applications. From the simple 345 that has up to 1650 rated lumens at 11W, to the larger 346-49 which has up to 12,800 lumens at 82W.
