

## WEDGE FAMILY

The original wedge fixture was designed in collaboration with an engineer at the Forest Service in the late 60's. It was designed around the A19 incandescent lamp, as that was the only appropriate source back then. The fixture was adapted to CF sources and MH over the years. With the advent of LED, it was adapted in the first decade of the 2000's.

The fixture is now comprised of a family of four sizes to meet the requirements of scale for many applications and there are now bollard and post top variations. The simple, clean design, has endured changing styles simply because it is an iconic design. All the fixtures are IDA (Intn'l Dark Sky) certified.

The family is offered in several painted finishes where the hood is made of aluminum. They are all offered in "Natural Bronze", meaning they are fabricated from solid bronze which patinas to a warm brown finish that will endure for decades. When ordered in bronze, the fixtures have very high sustainability attributes: The bronze has 90% recycled content, while the cast aluminum mounting back has 100%.
