## VANITY FIXTURES

Vanity lighting has evolved over the years as light sources have evolved. For commercial applications, fluorescent sources provided energy savings and diffuse light. Trends have included mirror lights and the use of the ubiquitous downlight, two styles that really do not get the right kind of light onto the face. LEDs have enabled new form factors, energy savings and warm color temperatures. Borden Lighting's family of vanity fixtures provide diffuse light, of the appropriate color temperature, with low glare. Most of Borden Lighting's vanity fixtures are available in multiple lengths to meet the needs of various applications.
