

Design

"Simplicity is the ultimate sophistication." *Leonardo Da Vinci*

Borden Lighting's architecturally based designs are tasteful, clean and elegant in their simplicity. Our product design is based on classic design fundamentals, not passing trends, resulting in lighting fixtures that complement a variety of architectural styles instead of competing with them. It's an approach we embrace, confident it will resonate with the design community.

Sustainability

"Design for sustainability means fostering innovation." *John Thackara*

At Borden Lighting, sustainability is more than a marketing hook or a buzzword; it's our commitment and our passion.

While some manufacturers' sustainability claims are based on energy efficiency, recyclability or some other single criterion, Borden Lighting products are designed from the ground up with the following *sustainability attributes*:

- *Energy efficient Compact Fluorescent lamps & LEDs*
- *High recycled materials content*
- *Low imbedded energy content*
- *End-of-life recyclability*
- *Manufacturing processes with the least impact to air and water*

We're dedicated to making all Borden products meet these criteria as much as possible. And while each product will meet these goals to different degrees, we are constantly looking for ways to incorporate more environmentally effective materials, components and processes into our products as the "Green Revolution" accelerates and more environmentally sound options become available.

Value

"There can be no value without quality." *Anonymous*

Because we're committed to the idea that value and quality are inextricably connected, Borden Lighting products deliver both, at every level, from the very outset.

Take design, where our philosophy of refined simplicity means fewer parts. Fewer parts, in turn, mean less labor, and less labor means lower costs. The result: high quality products at reasonable prices that will provide years of attractive, efficient and trouble-free service.

Made In California

Fabrication and assembly at our own California facility produces significant quality, sustainability and economic benefits. Our craftspeople work exclusively on Borden products, so there's pride of workmanship that can't be duplicated by overseas contract suppliers. Local manufacturing also means less transportation, lowering embedded energy for improved sustainability. And finally, local manufacturing means local jobs.
